SUMMARY

Computer Engineering student with hands-on experience in CI/CD pipelines, Docker, Kubernetes, and AWS. Reduced deployment effort through Jenkins automation and containerized microservice architectures. Strong foundation in DSA & OOP with active competitive programming practice. Targeting DevOps roles focused on infrastructure automation and system reliability.

EDUCATION

MIT Academy of Engineering, Pune <i>B.Tech – Computer Engineering</i>	2023 – 2027 CGPA: 8.46 / 10
Yashwantrao Chavan Institute of Science, Satara <i>HSC – Maharashtra State Board</i>	2023 84.17%
Maharaja Sayajirao Vidyalyaya, Satara <i>SSC – Maharashtra State Board</i>	2021 97%

TECHNICAL SKILLS

DevOps & Cloud: Jenkins, Docker, Kubernetes, CI/CD Pipelines, AWS (EC2, S3, DynamoDB, VPC, IAM, ELB, Auto Scaling, CloudFront)
Backend: Node.js, Express.js, Spring Boot
Frontend: React.js, HTML, CSS, Vanilla JS
Databases: MySQL, MongoDB (Mongoose)
Core CS: DSA, OOP, DBMS, Operating Systems, Linux
Tools: Git, GitHub, DockerHub

PROJECTS

- HostelHub – Cloud-Native Full-Stack Platform** [*GitHub*] Jan 2026 – Apr 2026
- AWS EKS — Kubernetes — CloudFront — S3 — ALB — Jenkins — Docker — React.js — Node.js — MongoDB Atlas — Independent*
 - Built a decoupled, cloud-native hostel management platform with a React frontend statically hosted on Amazon S3 and a Node.js REST API deployed on AWS EKS (Kubernetes), with role-based access control for students and administrators.
 - Designed a unified AWS CloudFront distribution routing `/*` to OAC-secured private S3 and `/api/*` to ALB, NGINX Ingress, and EKS, achieving 100% same-origin traffic with zero CORS overhead.
 - Containerized the backend using Docker multi-stage builds; configured Kubernetes rolling updates with zero downtime and a Horizontal Pod Autoscaler that triggers on CPU utilization above 70%, scaling from 2 to 5 replicas.
 - Engineered a split Jenkins CI/CD pipeline in which the frontend runs npm build followed by S3 sync and CloudFront cache invalidation, while the backend runs a Docker build through DockerHub and kubectl rollout, automating 100% of deployments.
 - Secured workloads using Kubernetes Secrets (MongoDB Atlas, Cloudinary, JWT) and ConfigMaps; enforced private S3 access via a CloudFront OAC ARN policy, eliminating public bucket exposure.
- Grocito – Real-Time Grocery Ordering & Delivery System** [*Link*] Jun 2025 – Aug 2025
- Spring Boot — React.js — MySQL — REST APIs — Real-Time Tracking — Team of 3*
 - Engineered a three-portal system (Customer, Admin, and Delivery Partner) supporting real-time order tracking, payment processing, and live map integration.
 - Designed optimized MySQL schemas and backend APIs capable of handling high-frequency concurrent transactions with minimal latency.
 - Built an admin analytics dashboard surfacing sales trends, inventory health, and order KPIs, improving operational decision-making efficiency.
 - Integrated a secure payment gateway and a donation tracking system with full transparency for donors.

EXPERIENCE

DevOps Intern

Jul 2026 – Present

Colgate-Palmolive – DevOps Team

Mumbai, Maharashtra, India (Hybrid)

- Working with enterprise DevOps workflows to support application deployment and infrastructure automation.
- Gaining hands-on experience with CI/CD pipelines using Jenkins, Git, and GitHub.
- Learning cloud infrastructure management on AWS and containerized application deployment using Docker.
- Assisting in Linux system administration, deployment automation, and environment configuration.
- Collaborating with cross-functional engineering teams to understand production-grade DevOps practices and software delivery processes.
- Continuously improving knowledge of Kubernetes, Infrastructure as Code (Terraform), monitoring, and cloud-native application deployment.

Full Stack Developer Intern

Jun 2025 – Aug 2025

Campus Credential

Remote

- Owned end-to-end delivery of the Grocito platform, from requirements gathering and system design to production deployment, within a six-week sprint.
- Led backend architecture decisions using Spring Boot and MySQL, establishing a modular MVC structure that supported parallel development across three portals.
- Facilitated daily standups and sprint reviews within an agile team of three, coordinating feature delivery and code reviews to maintain on-schedule releases.

COMPETITIVE PROGRAMMING

LeetCode: kshitij72 | Codeforces: kshitij x07
